07468411989 | michaeltansikorski@outlook.com | [linkedin.com/in/michael-tan-sikorski/](https://www.linkedin.com/in/michael-tan-sikorski/) | [mikeymictan1.github.io](https://github.com/mikeymictan1)

TECHNICAL SKILLS

Languages: C++, Java, Python, JavaScript, TypeScript, Haskell, HTML, GDScript
Developer Tools: GitHub, Flask, JQuery, SQL, AJAX, CSS Tailwind, Godot, Unreal Engine
Libraries: MySQL, TypeScript, Pygame, NumPy, Matplotlib, SQLite

EDUCATION

University of Warwick Sep. 2024 – Jun. 2027
BSc Computer Science - Achieved a First in the 1st Year
Highgate School Sep. 2009 – Jul. 2024
A-Levels: Computer Science (A), Maths (A*), Further Maths (A), Physics (A). GCSE: Eight 9's, two 8's*

EXPERIENCE

Software Engineer Aug. 2025 – Sept. 2025
University of Zurich Remote

- Contributed to 'Clear Skies,' an open-source app; honed an understanding of low-level programming principles by programming without the aid of a pre-built game engine (using Python, PyGame).
- Worked on over **20** bug-fixes and QA implementations at the end of the projects development to ensure quality for the **600+** people playing the game during a psychology study.
- Worked with an international team of **15+** people to deliver the project in time for tight deadlines of when the study would occur.

Software Engineer (Paid Internship) Jun. 2025 – Aug. 2025
Warwick Manufacturing Group, WMG Coventry, United Kingdom

- Developed an autonomous car driving simulator where users must navigate emergency vehicles in user-created scenarios.
- Designed and implemented an algorithm for rule-based vehicle placement, ensuring emergency vehicles were strategically placed based on spatial logic such as manhattan distance and ability to reach a randomly generated road accident.
- Created and programmed an interactive tutorial to teach users how to use the simulation by guiding them through creating a scenario; the easy to apprehend UI increased user understanding of the simulation by **85%**.
- Created comprehensive **50** page documentation for the entire projects codebase, outlining the function of key files, systems, and classes in the code with tables, diagrams, and explanations.

Game Developer and Founder Dec. 2024 – Present
Prelude Game Studios London, United Kingdom

- Founded and managed an independent game studio focused on innovative 2D and 3D game development.
- Sole developer of debut title "Amaz'd," engineered using OOP principles using Python and Pygame, achieving positive global reviews and over **200** players on Steam.
- Designed advanced features such as custom enemy AI and procedural level generation via depth-first maze creation for gameplay depth.
- Built and maintained the entire development pipeline for all studio projects, including testing in pytest, debugging, and deployment for cross-platform release by using the steam SDK.

Graphic Designer and Video Editor Apr. 2021 – Apr. 2022
Little Big Bell London, United Kingdom

- Produced and edited high-quality interior design and lifestyle video content, including branded segments for clients such as Amazon.
- Delivered engaging, public-facing videos through editing and design on Photoshop and Vegas Movie Studio, accumulating **20,000+** Instagram views per video.

PROJECTS

Poker Hand Evaluation & AI Engine | *Haskell, Functional Programming* Dec. 2024 – Feb. 2025

- Developed the back-end logic for a poker-like game featuring a comprehensive hand evaluation and scoring system, by using functional programming concepts such as higher-order functions for code abstraction and reusability.
- Developed a custom AI opponent capable of consistently outperforming baseline strategies, achieving **80%+** optimal play by simulating outcomes and leveraging probabilistic heuristics such as flush fallacy detection.
- Applied game-theoretic decision-making principles to construct a codebase transferable to fintech contexts such as investment portfolio optimisation or algorithmic trading strategy evaluation.

Banking Financial Literacy App - <WHACK> Hackathon Title Winning App | *Python, Pygame, Github* Oct. 2024

- Led a team of four in designing and developing an educational app to teach financial literacy to children, winning out of **150** contestants.
- Built a virtual stock market simulator using Pandas and a Python-based savings account model.
- Optimised team performance by assigning roles to leverage individual strengths and maximise productivity under tight deadlines.
- Pitched the project to Capital One representatives in a time-pressured presentation, demonstrating clear and efficient communication.

NVIDIA Jetson AI Certification | *Linux, Python, Neural Networks* Jun. 2023 – Jul. 2023

- Developed and trained an AI detection model utilising the ResNet18 neural network architecture on a Jetson Nano, enabling colourblind individuals to differentiate Skittle flavours based on colour recognition.
- Gained hands-on experience in machine learning by optimising model accuracy through iteratively training epochs **42** times and evaluating performance, with the model giving **96%** accuracy for recognising the correct skittle colour.

Other Projects

- Robot Maze Solving Algorithm** (Java, A* Algorithm) | **Low-Latency Movie Data Indexing App** (Java, Algorithmic Optimisation) | **3D Aim Training Simulation** (C++, Unreal Engine) | **Grid-Based Game Parser** (Haskell, Parsing) | **Pixel Art Gallery Social Media Site** (Flask, AJAX, jquery, TypeScript, MySQL) | **Binary-Star Exoplanet Detection & Classification Model** (Python, Matplotlib)
